Risk and Reward Profile

Historical data may not be a reliable indication for the future.

The risk category shown is not guaranteed and may change over time.

The risk and reward profile is classified by the level of historical fluctuation of the Net Asset Values of the share class, and within this classification, categories 1-2 indicate a low level of historical fluctuations, 3-5 a medium level and 6-7 a high level.

The value of your investment may fall as well as rise and you may get back less than you originally invested.

The fund may invest in instruments denominated in currencies other than the fund base currency. Changes in currency exchange rates can therefore affect the value of your investment.

This fund is categorised in risk class 5 because, in accordance with the investment policy, the value of the investments may fluctuate somewhat sharply. Consequently, both the expected return and the potential risk of loss may be above average.

Additional risks: emerging markets.
