Fidelity ProsperityBuild Fund

a sub-fund of Fidelity Investment Funds VI

Fidelity ProsperityBuild Fund FC-ACC-GBP
(ISIN:GB00BTXWXV75)

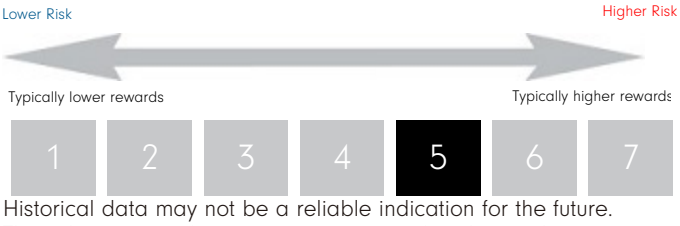

This fund is managed by FIL Investment Services (UK) Limited

Objectives and Investment Policy

Objective: The fund aims to increase the value of your investment over a period of 5 years or more.
Investment Policy: The Fund will invest at least 80% in equities (and their related securities) of companies globally which could include countries considered to be emerging markets. The Fund is not restricted in terms of size, industry, or geographical split. The remainder will be invested in other investment types such as funds, cash and derivatives.
Investment Process: The Fund is actively managed without reference to a benchmark. The Investment Manager identifies suitable opportunities for the Fund utilising in-house research and investment capabilities.
Derivatives and Techniques: Derivatives are investments whose value is linked to another investment, or to the performance of a stock exchange or to some other variable factor, such as interest rates and used to reduce risk or transaction costs and/or to generate extra income or further increase the value of your investment.

Additional information: As this is a non-distributing share class, dividends are re-invested.
Shares can usually be bought and sold each business day of the fund.
Many funds sold in the UK are grouped into sectors by the Investment Association (the trade body that represents UK Investment Managers), to facilitate comparison between funds with broadly similar characteristics. This Fund is classified in the IA Global sector. Performance data on funds within this sector may be prepared and published by data providers, and will be used when evaluating the performance of this Fund. The IA sector most closely reflects the combination of assets in the Fund.

Risk and Reward Profile

Historical data may not be a reliable indication for the future.
The risk category shown is not guaranteed and may change over time.
The lowest category does not mean a "risk free" investment.
The risk and reward profile is classified by the level of historical fluctuation of the Net Asset Values of the share class, and within this classification, categories 1-2 indicate a low level of historical fluctuations, 3-5 a medium level and 6-7 a high level.
The value of your investment may fall as well as rise and you may get back less than you originally invested.
The fund may invest in instruments denominated in currencies other than the fund base currency. Changes in currency exchange rates can therefore affect the value of your investment.
This fund is categorised in risk class 5 because, in accordance with the investment policy, the value of the investments may fluctuate somewhat sharply. Consequently, both the expected return and the potential risk of loss may be above average.
Currency hedging may be used which aims to reduce the effect of such changes. However, the effects may not be completely eliminated to the degree expected.
Emerging markets may be more volatile and it could be harder to sell or trade securities. There may be less supervision, regulation and less well-defined procedures than in more developed countries. Emerging markets can be sensitive to political instability, which can result in greater volatility and uncertainty, subjecting the fund to the risk of losses.
The fund may be exposed to the risk of financial loss if a counterparty used for derivative instruments subsequently defaults.
