Due to the potential for losses, the Financial Conduct Authority (FCA) considers this investment to be high risk.

What are the key risks?

1. You could lose all the money you invest

- The performance of most cryptoassets can be highly volatile, with their value dropping as quickly as it can rise. You should be prepared to lose all the money you invest in cryptoasset exchange traded notes.
- The cryptoasset market is largely unregulated. There is a risk of losing money due to risks such as cyber-attacks, financial crime and firm failure.

2. You should not expect to be protected if something goes wrong

- The Financial Services Compensation Scheme (FSCS) doesn't protect this type of investment because it's not a type of investment that the FSCS can protect. Learn more by using the FSCS investment protection checker here: <https://www.fscs.org.uk/check/investment-protection-checker/>
- Protection from the Financial Ombudsman Service (FOS) does not cover poor investment performance. If you have a complaint against an FCA-regulated firm, FOS may be able to consider it. Learn more about FOS protection here: <https://www.financial-ombudsman.org.uk/consumers>

3. Cryptoasset investments can be complex

- Investments in cryptoasset-linked products can be complex, making it difficult to understand the risks associated with the investment.
- You should do your own research before investing. If something sounds too good to be true, it probably is.

4. Don't put all your eggs in one basket

- Putting all your money into a single type of investment is risky. Spreading your money across different investments makes you less dependent on any one to do well.
- A good rule of thumb is not to invest more than 10% of your money in high-risk investments. <https://www.fca.org.uk/investsmart/5-questions-ask-you-invest>

Important Information

Before investing you should read the Base Prospectus and refer to the section entitled 'Risk Factors' for further details of risks associated with an investment in the ETP. The value of investments may be highly volatile and an investor may not get back the amount invested. Please refer to the Prospectus and KID of the fund before making any final investment decisions.

Objectives

This product is a debt security fully collateralised by Bitcoins held in a depository wallet for safekeeping, and whose performance is therefore directly linked to the price of Bitcoin

Past performance is not a guide to future performance and should not be the sole factor of consideration when selecting a product. Returns may increase or decrease as a result of currency fluctuations. Performance data is based on the net asset value (NAV) of the ETP which may not be the same as the market price of the ETP. Individual shareholders may realise returns that are different to the NAV performance

Risk Indicator

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. This is a higher risk product which rates the potential losses from future performance at a high level, and poor market conditions are very likely to impact the capacity to pay you. Be aware of currency risk. You will receive payments in a different currency, so the final return you will get depend on the exchange rate between the two currencies. This risk is not considered in the indicator shown above. Additionally, the product is subject to further risks, such as uncertainties related to the legal and regulatory status of the underlying or the risks associated with nascent technology and crypto protocols such as hacking and theft of Bitcoin. This product does not include any protection from future market performance so you could lose some or all of your investment. If Fidelity Exchange Traded Products GmbH is not able to pay you what is owed, you could lose your entire investment. For detailed information about all risks please refer to the risk sections of the legal documentation. Updated and additional documents relating to the product, particularly the prospectus and any supplements and the final terms can be obtained on the legal documentation website under <https://www.fidelityinternational.com/fidelity-physical-bitcoin-etp-legal-documentation> in accordance with legal requirements.

Glossary

Bitcoin Entitlement: The quantity of Bitcoin corresponding to each unit of the product and to which a holder is entitled on redemption. Such entitlement decreases by 0.35% annually, calculated on a daily basis from the entitlement over the entire holding period.

Wallet: A wallet is a piece of software that securely stores the credentials necessary to hold and transact Bitcoins. A wallet maintains the set of addresses the Bitcoin has been sent/received from and manages its access through cryptographic keys.

Crypto Custody: A crypto custodian is a service provider that stores digital assets such as Bitcoin on behalf of customers by ensuring that Bitcoin's cryptographic keys are suitably maintained. Fidelity Physical Bitcoin ETP utilises a cold storage custody service provided by Fidelity Digital Assets.
